[The Issues](#) > [Water Pollution](#)

Water Pollution

Subtitle Lorem Ispum. Subtitle Lorem Ispum.

40% of America's rivers are too polluted for fishing, swimming, or aquatic life.

A change in the chemical, physical, biological, and radiological quality of water that is injurious to its existing, intended, or potential uses (for example, boating, waterskiing, swimming, the consumption of fish, and the health of aquatic organisms and ecosystems). The term "water pollution" generally refers to human-induced (anthropogenic) changes to water quality. Thus, the discharge of toxic chemicals from a pipe or the release of livestock waste into a nearby water body is considered pollution. Conversely, nutrients that originate from animals in the wild or toxins that originate from natural processes are not considered pollution.

Water pollution can threaten human health when pollutants enter the body via skin exposure or through the direct consumption of contaminated food or drinking water. Priority pollutants, including dichlorodiphenyl trichloroethane (DDT) and polychlorinated biphenyls (PCBs), persist in the natural environment and bioaccumulate in the tissues of aquatic organisms. These persistent organic pollutants are transferred up the food chain (in a process called biomagnification), and they can reach levels of concern in fish species that are eaten by humans.

LOCAL CONTAMINANTS:

1. PCB's:

In Brief: The major use of PCBs has been as dielectric fluid in electrical equipment, particularly transformers capacitors, electromagnets, circuit breakers, voltage regulators, and switches. PCBs have also been used in heat transfer systems and hydraulic systems, and as plasticizers and additives in lubricating and cutting oils.

PCBs can enter the body through the lungs, gastrointestinal tract, and skin, circulate throughout the body, and be stored in adipose tissue. PCBs have been detected in human adipose tissues and in the milk of cows and humans. Some PCBs have the ability to alter reproductive processes in mammals. There is concern that PCBs may be carcinogenic in humans. [Learn More >](#)

2. Sewage Overflow & Water Contamination

3. Nuclear Waste

PCB's

The major use of PCBs has been as dielectric fluid in electrical equipment, particularly transformers capacitors, electromagnets, circuit breakers, voltage regulators, and switches. PCBs have also been used in heat transfer systems and hydraulic systems, and as plasticizers and additives in lubricating and cutting oils.

PCBs can enter the body through the lungs, gastrointestinal tract, and skin, circulate throughout the body, and be stored in adipose tissue. PCBs have been detected in human adipose tissues and in the milk of cows and humans. Some PCBs have the ability to alter reproductive processes in mammals. There is concern that PCBs may be carcinogenic in humans.

The most commonly observed health effects in people exposed to large amounts of PCBs are skin conditions such as chloracne and rashes, but these were known to be symptoms of systemic poisoning dating back to the 1920s. Studies in exposed workers have shown changes in blood and urine that may indicate liver damage. PCB exposures in the general population are not likely to result in skin and liver effects. Most of the studies of health effects of PCBs in the general population examined children of mothers who were exposed to PCBs.

Stop Pollution

Defending the Hudson. Protecting our Communities

Riverkeeper serves as the Hudson River's chief citizen-based pollution enforcement organization. Our legal team serves a diverse population, from urban dwellers residing in New York City to local fishermen and working class families who live and work in the rural Hudson Valley. Because of Riverkeeper's widespread reputation for taking on polluters, whether large or small, we are increasingly deluged with requests for our services. [Read more](#)

Sewage & Combined Sewage Overflows

Riverkeeper has been leading the fight to keep sewage out of the Hudson River and its tributaries for nearly three decades. As treatment plants and sewer lines fail, water quality suffers, endangering human health and the environment. Today, sewage threatens to become the primary pollutant imperiling the Hudson. Wastewater treatment infrastructure in New York has deteriorated due to age, neglect, lack of oversight and enforcement, and the increased pressure of sprawl growth. Hundreds of municipalities are competing for limited and diminishing funds for upgrades and expansions. Both federal and state clean water funding and staffing have been cut. Yet, growth continues unabated. Municipalities often green-light development projects that immediately strain sewer systems.

Riverkeeper has brought suits against municipalities for sewage leaks, commented on developments that would worsen sewage threats, and protested the weak consent order currently under consideration against New York City for decades of dodging the CSO crisis. Click on the links below to learn more about some of the most recent battles.

New Windsor Sewage Treatment Plant

Since 1998, sewage effluent has seeped out of two manholes on a small island in the middle of Moodna Creek. The effluent – treated water leaving the New Windsor Sewage Treatment Plant – still contained low levels of organic matter, polluting the Creek with fecal coliform and possibly other organisms, suspended solids, and altered pH levels. In addition to polluting the Creek, the effluent created a ring of muck around each manhole in which no plant life could survive, swampy enough that one person nearly got stuck in the muck. Located in New Windsor, these manholes are hidden from view of the mainland shore and can only be accessed by boat or by wading out to the islands at low tide.

Riverkeeper sued the Town of New Windsor under the Clean Water Act to abate these illegal discharges. The case - led by a law student from the Pace Environmental Law Clinic - was settled on February 25, 2005. New Windsor has agreed to raise and install watertight seals on the manholes, repair any other nearby leaks in the effluent pipe, and remediate all areas of collected sludge surrounding the manholes. In addition, New Windsor will create a canoe launch near the New Windsor Water Department building, allowing citizens to more easily access and enjoy a cleaner Moodna Creek. These actions should all be completed by mid-September, 2005.

▼ Riverkeeper press releases

- MARCH 24, 2005:**
- [> Riverkeeper and New Windsor Settle Sewage Case](#)
 - [Download press release \(pdf, 2.3mb\)](#)
- Riverkeeper and the Town of New Windsor have signed a consent order, settling the pending lawsuit brought by Riverkeeper against the Town of New Windsor for two sewage effluent overflows into Moodna Creek. Under the consent order, New Windsor will raise and seal the two manholes, remediate the areas affected by the sewage sludge, and inspect for other potential leaks.

Newtown Creek being considered for the Superfund

In response to a formal request by Congressional Representatives Weiner, Velazquez, Solis, and Green, the U.S. Environmental Protection Agency (EPA) will study contamination in and around Newtown Creek, which could result in its being designated a Superfund site. Riverkeeper, which is working with local communities and elected officials to ensure a comprehensive cleanup of Newtown Creek, welcomes EPA's involvement. EPA will examine existing information from ongoing environmental investigations on the creek, and determine if the contamination warrants additional studying and sampling under the Superfund law. 09.04.08 | POLLUTION | PRESS RELEASE:

Riverkeeper and Councilman Eric Gioia Take Aim at Concrete Polluters on Newtown Creek

FOR IMMEDIATE RELEASE: September 4, 2008
Contacts: Craig Michaels, Riverkeeper, 917.579.5582
Eric Koch, NYC Councilman Eric Gioia, 617.733.6891

NYCON Allegedly Dumping Concrete Illegally in Newtown Creek
NEW YORK- Today, the environmental watchdog group Riverkeeper and New York City Councilman Eric Gioia (D-Queens), Chair of the City Council Committee on Oversight and Investigations, announced legal action against a major concrete manufacturer on Newtown Creek for violations of federal environmental laws. They are alleging that NYCON Supply Corporation, located in Long Island City, Queens, has been illegally discharging concrete waste without a permit into a tributary of the heavily polluted Newtown Creek, in violation of both the Clean Water Act and the Resource Conservation and Recovery Act (RCRA).

Newtown Creek, the site of a massive oil spill, is one of the most polluted waterways in the United States. During its routine patrols of NYC waterways, Riverkeeper has observed NYCON dumping concrete waste into the Dutch Kills tributary of Newtown Creek without a required Clean Water Act permit. Riverkeeper also observed piles of gravel and layers of concrete covering the riverbed adjacent to the NYCON facility.

Today, Riverkeeper filed a Notice of Intent to Sue NYCON. In addition to the lack of a Clean Water Act permit, Riverkeeper also believes that the current discharge of NYCON's waste constitutes an imminent and substantial endangerment to health and environment under RCRA. Both the Clean Water Act and RCRA authorize citizen groups to sue polluters, subjecting potential violators to up to \$32,500 in penalties per day per violation.

"The pollution issues confronting Newtown Creek and other waterways surrounding New York City cannot be fully addressed without enforcing environmental laws and holding polluters accountable for their actions," said Riverkeeper Investigator Craig Michaels. "We will continue to work with elected officials and government agencies to track down and prosecute environmental lawbreakers who threaten the environmental and public health of our communities."

"For too long, Newtown Creek has been the forgotten waterway of New York City, and polluters have taken advantage by dumping with impunity," said Councilman Eric Gioia. "We're here today to send a strong message that that we will not stand for more dumping and more pollution in the creek. Polluters, beware: we are watching, we are vigilant, and we will go after you."

10.12.08 | RIVERKEEPER EVENT:

New York Water Fest

WHEN: Sunday October 12th, 2008
WHERE: Contacts: North Cove Marina, NYC
EVENT WEBSITE: www.nywaterfest.org

See the city in a whole different way by way of the mighty Hudson! Join Riverkeeper for the New York Water Fest to raise awareness about the importance of the Hudson River to New York's history, commerce, arts and culture as well as the sources of, and threats to, New York City's drinking water supply. Water Fest will feature.

Water City:

Featuring live music, great food, wellness and relaxation tents and New York's leading clean water advocates ready to answer your water questions and challenge you to Take Back the Tap. At North Cove Marina, overlooking the Hudson River, open 12 - 5pm.

Paddle Rally:

A full day of on-water activities that allow first-time, beginner and advanced paddlers to safely experience the dynamic water of the lower Hudson River in NY Harbor with friends and other paddlers.

Big Apple Splash:

Raft down the Hudson River with friends, family and a certified professional guide as part of this 5-mile raft flotilla from Pier 96 to Water City at North Cove Marina. Each raft can hold 10-12 paddlers. No experience required.

Kayak Poker Run:

Play to win as part of this paddle rally that travels to five different locations on the Hudson River playing Five Card Draw. Paddle at your own pace and arrive at Water City, North Cove Marina, to pick up your final card by 3:00pm. Cash prizes will be awarded to the paddlers with the highest and lowest poker hands. From 10am to 3pm. Paddling experience required.

Floating Meditation:

Allow your spirit to soar while floating in a kayak on nature's moving energy - water. Join the creator of Floating Meditation in this two-hour program that combines world-class paddling instruction and a guided meditation. At Pier 40, 8am - 10am for experienced paddlers and 11am - 1pm. For beginning paddlers.

Walk Up Kayaking:

Enjoy a free 20-minute sit-on-top kayaking program, provided by the Downtown Boathouse from 9am - 6pm at their Pier 40 or Pier 96 locations. No experience required.

Skill Demonstrations:

View and learn about the sport of kayaking. Rolling, edging, bracing, equipment overview and a flatwater/whitewater playboat session will be demonstrated throughout the day at North Cove Marina.

Beginner Kayak Lesson:

For the beginner and novice seeking a quick introduction to the foundations of safe and efficient sea paddling. Introduction to the marine environment, sea kayak safety and design, equipment and paddling basics. At Pier 40, 9:30am -12:30pm.

Take the NYC Tap Water Challenge:

An activity that challenges you to taste test NYC's drinking water versus all the rest. Food & Vendors: Open to public.

Water Quality

The Hudson River

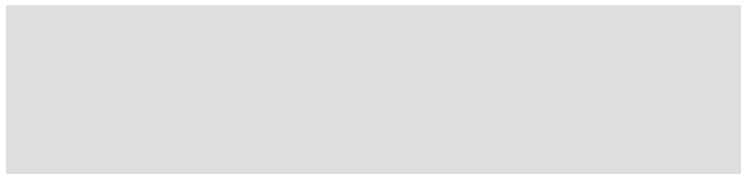

One of the most frequently asked questions in the Hudson Valley is whether it is safe to swim and boat in the Hudson River. Riverkeeper and LDEO are sampling water from aboard Riverkeeper's patrol boat at 68 sites on the Hudson from New York Harbor to the confluence of the Mohawk and the Hudson above Troy, NY. View the quality results by area:

Select Counties Or [Explore the River](#)

[See Results](#)

The Watershed

The high quality of the NYC drinking water supply is world-renowned. Because the supply continues to meet all health and water quality standards, the City of New York has received waivers from federal requirements that would otherwise require filtration of the water supply.

Over the past hundred years, the tunnels that carry drinking water through New York City's distribution system have developed a substantial layer of biofilm – an aggregation of microorganisms. These micro-organisms secrete a protective sticky compound on the tunnel walls. Many organic contaminants which are-suspended or dissolved in the water passing through the tunnel, then adhere to the biofilm. [Learn More >](#)

8/19/2008	0	73.4	22.4

Salinity:

Estuaries like the Hudson are where freshwaters in rivers meet the sea. Salinity tells us about the relative contribution of fresh and salt water within a particular region of the estuary. Salinity generally increases towards the mouth of the estuary, although salinity at any location can change with the tide. Heavy rains will push freshwater further down the estuary, while dry weather will allow salty water to penetrate further north. Many aquatic organisms have a preferred range of salinities where they can best survive. During our sampling trips, salinity is measured in parts per thousand (ppt). Ocean salinity is about 34 ppt and the freshwaters of the upper Hudson River are close to 0 ppt.

Our Methods

Riverkeeper has doubled the size of its legal team in the past 3 years.

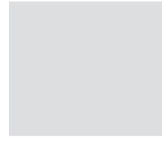

Riverkeeper combines a unique set of strengths that make such alliances attractive to many groups: a professional reputation, a grassroots base of public support, a powerhouse of attorneys, and strong interlinking partnerships with key organizations expert in law, engineering, biology, hydrology, economics and energy policy.

We serve a diverse population, from urban dwellers residing in New York City to local fishermen and working class families who live and work in the rural Hudson Valley. With every passing day, the public's concern only increases for rigorous protection of the drinking water supply, for power plant safety, and for preservation of their local environment. Because of Riverkeeper's widespread reputation for taking on polluters, whether large or small, we are increasingly deluged with requests for our services.

Due to this increase in requests for assistance, Riverkeeper has doubled the size of its legal team during the past three years, and hired a staff investigator to respond to citizen pollution reports. Investigations and cases usually start with a simple phone call or e-mail, or someone hailing our patrol boat out on the river with a tip. On the river, our Boat Captain, John Lipscomb may investigate the issue himself or call into the office for support. Then, our investigator, Basil Seggos, will be dispatched to the suspected site or to meet with the citizen "watchdog". Once we have sufficient information we can determine if a violation of Clean Water, zoning codes or other issues is occurring. In many cases we will be able to guide the person, or group, that informed us of the violation in what their rights are, and often stop the problem right there and then. When the case is more complicated or grievous, we will decide how we can bring the appropriate legal resources to bear.

Pace Environmental Litigation Clinic

In the fall of 1987, Riverkeeper joined with the Pace University School of Law to establish the Pace Environmental Litigation Clinic. The Clinic's directors and professors, Karl S. Coplan and Robert F. Kennedy Jr., instruct eight to ten second- and third-year law students for a two-semester period on legal issues developed by the Riverkeeper program of environmental investigation and monitoring.

Through a special practice order from the New York State Supreme Court and the federal courts, the clinic students have permission in New York State to act as practicing attorneys. The students represent Riverkeeper in federal and state courts, federal and state administrative proceedings and occasionally in local proceedings. Their efforts have led to precedent-setting decisions by federal courts under both the Clean Water Act and the Resource Conservation and Recovery Act.

The school teaches law students to use their skills to address areas of public concern, including the impact of human activities on the environment. Through the clinic program, the students gain in-depth professional training in environmental law while having a measurable impact on the management of one of the premier natural resources on the East Coast: the Hudson River-Long Island Sound estuarine system.

At Riverkeeper we appreciate and depend on the ongoing support our volunteers provide us with. A variety of opportunities exist for you to contribute to our continued success. Riverkeeper has a volunteer position for you as long as you have the passion. To sign up and for more information, contact Heartie Look directly at: hlook@riverkeeper.org

Volunteer at Events

3rd Annual New York Water Fest

Riverkeeper is seeking a strong team of volunteers to ensure that it's 3rd annual Water Fest is on of the best fall events on the Hudson!

Volunteers may work on the logistics team, land crew, or clean up crew. There will be 3 four hour shifts from 8 a.m. through 6 p.m. This opportunity is fun, outdoors, and active! Come take in the fall air and help us educate all New Yorkers about the importance of their Hudson River in the history, culture, arts, and commerce of New York, as well as the sources of and threats to their drinking water sources!

To sign up and for more information, visit the website: www.nywaterfest.org or contact Heartie Look directly at: hlook@riverkeeper.org.

Retail Partners

By supporting our partner companies, you will maximize your giving to Riverkeeper. Each company donates a portion of the proceeds to Riverkeeper for every purchase that is made through our website links.

[logo]

Bar Milano

From early breakfast to a late-night meal, Bar Milano serves a modern interpretation of classic Italian cuisine with an understated elegance and the warm hospitality and lively vibe for which its owners are known.

For every sparkling water ordered Bar Milano will donate 25% of the proceeds to Riverkeeper.

Barnes & Noble

Barnes & Noble donates 2-5% of sales to Riverkeeper. Check out this weeks New Releases, or find that perfect gift by searching for the latest and greatest Books, DVDs, Music, & Videos at Barnes and Noble.

Green Mountain Coffee

At Green Mountain Coffee, we are dedicated to providing the richest aroma and flavor, for the highest quality coffee experience. We travel the globe to purchase the finest coffees, batch roast them to peak flavor, and vacuum package them fresh for your enjoyment.

NYC H2O

Kick the bottled water habit and buy an NYC H2O Sports Bottle made from safe, non-leaching recycled plastic. Tap Into the City will donate \$1 to Riverkeeper for every bottle purchased online.

Party For Humanity

Party for Humanity is a non-profit organization that let's you celebrate by having party guests give to a charity of your choice.
